1. Precaution

*Acinetobacter* is a group of bacteria commonly found in soil and water. While there are many types or “species” of *Acinetobacter* and all can cause human disease, *Acinetobacter baumannii* accounts for about 80% of reported infections.

Acinetobacter poses very little risk to healthy people. However, people who have weakened immune systems, chronic lung disease, or diabetes may be more susceptible to infections with Acinetobacter.

Acinetobacter can be spread to susceptible persons by person-to-person contact or contact with contaminated surfaces.

2. PPE: follow SOP #2.0 donning and doffing procedure
